

KLIK-KLAP®

aka

Let's have some fun!

KLIK-KLAP® are unique wooden toy bricks. Create thousands of rotary and fixed arrangements using pressure connections. The **KLIK-KLAP®** toy bricks are a toy for all the senses - it rattles, clicks, chucks, smells like nature, is pleasant to the touch, sight, it is catchy and absorbing.

Wooden toys **KLIK-KLAP®** are made from a natural material with dominant share of manual work, so each piece of the set is an original. Individual parts of **KLIK-KLAP®**, entire sets, accessories and news can be found at www.klik-klap.cz or request them from your seller of toys, gifts, souvenirs, ...

Instructions for use: Connect and disconnect individual parts of the **KLIK-KLAP®** toy bricks using paired studs that are permanently bolted to the wooden parts. Create and re-create any combination from parts of **KLIK-KLAP®** according to you mood and imagination. The initial seemingly difficult connection of the parts is overcome in minutes. Start by connecting larger parts. The studs are easier to connect by pressing from the side, it is easier to disconnect them by breaking the stud connection.

When you are done playing, put the entire **KLIK-KLAP®** set back to its place, preventing the loss of any parts.

Do not leave your creations made with **KLIK-KLAP®** without supervision. It has been proven that whoever finds themselves near them, breaks them up, rebuilds them and you will be left with nothing.

BASIC SET I

KLIK-KLAP®

It contains a total of 40 different wooden pieces intended for play:

Note: drawings of individual parts are only indicative

18 x wheel (9 x ball + 9 x spring)

12 x connector (3 x 4 pcs - short, medium, long; two combinations of studs)

4 x roof (2 x 2 pcs - short, long; two combinations of studs)

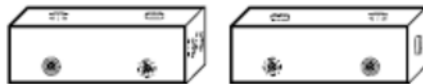

2 x cube (two combinations of studs)

1 x rectangular prism (end)

3 x square prism (1 x front, 2 x interconnecting)

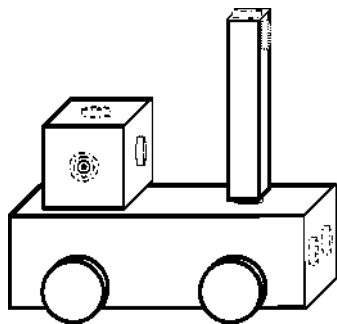

and 1 x packaging + instructions, which are not intended for playing.

These 40 parts with a specific placement of sixty pairs of studs attached by 120 screws allow the building of 3,633 different combinations.

Purpose: Playing with the **KLIK-KLAP®** toy blocks supports imagination, patience, independence, concentration and helps to reduce anxiety and stress. The **KLIK-KLAP®** toy bricks are excellent for girls and boys, teenagers as well as adults. Connecting parts using the studs requires skill and strength that children gain around the age of 5.

Composition: The **KLIK-KLAP**® toy consists of wooden and metal parts. Wooden parts may exhibit surface roughness, different colour and design depending on the type of wood used. None of this is a defect, these are the properties of the material produced by nature. The wooden parts are not glued, stained or painted, therefore they are harmless and live and mature along with you. The screws for attaching the studs are made of hardened steel with zinc finish. Studs are brass with nickel or zinc finish. The **KLIK-KLAP**® toy passed certification under EU and Czech legislation, it does not contain phthalates, formaldehyde or magnets.

The packaging and instructions are made of paper and are not intended for playing, as well as any of their plastic components, which are made of approved materials approved for direct and permanent contact with food.

Disposal of any part of the set or packaging in compliance with the correct method of disposal of waste does not cause damage to the environment.

Additional information: Some screws may become slightly loose by playing with the **KLIK-KLAP**® toy blocks. A gently loosened screw has lost its friction force with the stud and will not loose up any more. You can re-tighten it or leave it in this condition (TORX screwdriver no. 10 so-called start). When the studs turn around freely, it may be beneficial for some connections (wheels). Keep the instructions for laser use!

Maintenance: Wipe the individual pieces of the **KLIK-KLAP**® toy bricks with a dry or slightly damp cloth as needed. Avoid prolonged contact with liquid, soaking may lead to an undesirable change in the appearance or damage to the structure of wood and thus the life of the connections.

Permitted repairs carried out by adults: If a thread is pulled, remove the screw with the stud. Fill the hole in the wooden part, for example, with a piece of a slightly bevelled skewer. Break/cut off the protruding part level with the wooden part. You can soak the inserted filling in advance in a drop of glue intended for wood. Screw the screw with the stud back. If you use glue, wait for its hardening according to the instructions for the glue used.

Manufacturer:
Ing. Jiří Modr
Mezouň 5 267 18
IČ (ID no.): 02022605
Czech Republic
www.klik-klap.cz

Made in Czech Republic.
